SUMMARY

Senior frontend developer with more than five years shipping production web software in TypeScript, Vue, Nuxt and React, with Node, PostgreSQL and AWS behind it. I take features from an unclear problem to launch: I wrote the architecture analysis and phased rollout plan for a subscription flow with six scattered entry points, built workflow software end to end, and fixed data problems that were distorting revenue reporting, working closely with product, design and marketing. I use Claude Code and MCP tools every day to prototype and ship faster.

EXPERIENCE

Senior Software Developer, A Parent Media Co. Inc. (APMC)

Sep 2024 – Aug 2026

Calgary, Alberta · Streaming media company with two consumer brands, Victory+ and Kidoodle.TV, across web, iOS, Android and smart TV

- Owned the Rangers subscription flow end to end on Stripe Embedded Checkout: inherited six scattered entry points, wrote an architecture analysis with a phased plan and rollback strategy, then centralized the entry points, moved plan IDs and prices into one configuration read from the API, and removed the dead code left behind.
- Fixed overcounting in ad-beacon reporting, which feeds revenue reports, by deduplicating beacons and sharing one ad session across tabs through BroadcastChannel.
- Worked on consent management with Sourcepoint: tied consent to the user account, gated the Meta pixel behind consent, and moved consent defaults into server-rendered HTML so no tag loads before them. Corrected UTM and placement parameters that were misattributing revenue in marketing reports.
- Replaced three parallel modal systems with one accessible dialog foundation, themed for both brands through design tokens and migrated brand by brand.
- Redesigned authentication state into one cookie-backed source of truth, and rebuilt the route middleware so each page declares its own access requirements.
- Learned Dart and Flutter to build features for a macOS console that broadcast operators used during live games: ad-break controls, input switching improvements and fullscreen video. Cut and shipped its releases.
- Wrote my own work: 548 Jira tickets as reporter, 375 of which I also built, plus 992 merged pull requests in two years. Reviewed about 385 pull requests from teammates.
- Maintained the GitHub Actions deploy pipelines, wrote and maintained the release guide, and ran QA on releases.

Software Engineer, Kettl Inc.

May 2023 – Sep 2024

Calgary, Alberta (remote) · Event-production management software

- Built Revenue Centers end to end: data model, migrations for existing tenants, default assignment for new tenants, associations with events and production sheets, and tests. Shipped as a nine-part rollout.
- Designed the GraphQL schema and resolver layer through Prisma to PostgreSQL for user management, production control and workforce tracking.
- Added a role-based permissions system, and built an Assign to Me task flow with optimistic UI updates (React, Next.js, Apollo GraphQL).

Front End Developer, Tugboat Logic (acquired by OneTrust)

Mar 2021 – May 2023

Calgary, Alberta (remote) · Security assurance platform for SOC 2, ISO 27001, GDPR and HIPAA

- Built customer-facing audit-readiness dashboards, including version comparison of evidence between audit cycles (React, Redux).
- Built a Storybook component library from Figma specs that reduced duplication across products, with unit and integration coverage in React Testing Library and Cypress.

Project Coordinator, Access SMT

Feb 2018 – May 2020

Calgary, Alberta

- Project coordination, procurement and inventory: delivery timelines, vendor management and inventory reconciliation.

OPEN SOURCE

frontend-compliance · github.com/raquel-mijares/frontend-compliance. Consent gating, analytics without PII and kids privacy as runnable TypeScript, with 29 unit tests and 18 Playwright specs in CI.

SKILLS

Frontend	TypeScript, JavaScript, Vue 3, Nuxt, React, Next.js, HTML, CSS, Storybook, accessibility (WCAG)
Backend and data	Node, Apollo GraphQL, Prisma, PostgreSQL, REST APIs, Stripe
Mobile and desktop	Flutter, Dart
Cloud and delivery	AWS, Docker, GitHub Actions, Git, Jira
Testing	Playwright, Vitest, Cypress, React Testing Library
AI	Claude Code, agentic workflows, MCP integrations (Jira, GitHub, browser)

EDUCATION

2015	Bachelor's, Production Engineering, Universidad Metropolitana (UNIMET), Caracas
2021	Certificate, Full Stack Development, InceptionU, Calgary
2017	Certificate, Supply Chain Management, Mount Royal University, Calgary
